Find files that have changed on your Kali virtual machine within the past 7 days by running a specific command in the background.

```
┌──(kali㉿kali)-[~/OSCP_Training]
└─$ find / -type f -mtime -7 2> /dev/null > text.txt &
[1] 177648
```

Re-run the previous command and suspend it; once suspended, background it.

```
┌──(kali㉿kali)-[~/OSCP_Training]
└─$ find / -type f -mtime -7 2> /dev/null > text.txt
^Z
zsh: suspended  find / -type f -mtime -7 2> /dev/null > text.txt

┌──(kali㉿kali)-[~/OSCP_Training]
└─$ bg
[1]  + continued  find / -type f -mtime -7 2> /dev/null > text.txt
```

Bring the previous background job into the foreground.

```
┌──(kali㉿kali)-[~/OSCP_Training]
└─$ fg
[1]  + running    find / -type f -mtime -7 2> /dev/null > text.txt
```

Start the Firefox browser on your Kali system. Use ps and grep to identify Firefox's PID.

```
┌──(kali㉿kali)-[~/OSCP_Training]
└─$ ps -elf | grep firefox

Terminate Firefox from the command line using its PID.

```
┌──(kali㉿kali)-[~/OSCP_Training]
└─$ kill 173728
